

Major Project: Complete the Editkaro.in Website

Objective:

Your task is to complete the entire website for **Editkaro.in**, a social media marketing and video editing agency. This project will allow you to apply the skills you have learned in HTML, CSS, JavaScript, and other web development technologies.

Project Details:

1. Project Scope:

- You will work on finalizing the design and functionality of the website.
- Make sure the website is responsive and works well on different devices.

2. Required Changes:

- Implement the changes specified in the attached code.
- Ensure that the portfolio section showcases the videos effectively, categorized as shared by the client.
- Ensure that each button is functional. If you don't have specific information to input (e.g., "Our Team"), create a placeholder page with random names and images.
- Optimize the website for performance and SEO best practices.

3. Key Features:

- **Home Page:** An engaging introduction to Editkaro.in and their services.
 - **Email Collector:** Create an email subscription form on the home page. Store the submitted emails in a separate Google Sheet or Excel file. You can integrate the form with Google Sheets using Google Apps Script or an API to automate this process.
- **Portfolio Page:** Display the client's video work categorized into Short Form, Long Form, Gaming Videos, Football Edits, eCommerce Ads, Documentary Style, Color Grading, Anime Videos, and Ads.
- **About Us Page:** Provide information about Editkaro.in, including their mission, vision, and team.
- **Contact Us Page:**
 - Create a **contact information submission form** where users can submit their name, email, phone number, and message.
 - The data from this form should be automatically stored in a **Google Sheet or Excel file**. You can achieve this by integrating Google Sheets with the form using Google Apps Script or using a backend API that stores the form data.

4. Deployment:

- Once completed, deploy the website on a suitable hosting platform (e.g., Netlify, Vercel, or GitHub Pages) for public access.

5. Submission:

- Submit the final code repository (GitHub link) along with a brief report outlining the changes made, challenges faced, and how they were overcome.

6. Evaluation Criteria:

- Completeness of the website.
- Design and usability.
- Responsiveness across devices.
- Functionality of the email collector and contact form (correct integration with Google Sheets/Excel).
- Code quality and organization.
- Successful deployment and functioning of the website.
